

MEDICAL

Bridging the gap between patients and doctors.

Patients

- **Have no solution today to manage their imaging or files**
- can view, store, share with anybody
- faster access to medical providers
- freedom to choose services
- better case management

Patients will take Medicai to their doctor(s) and be agents of change

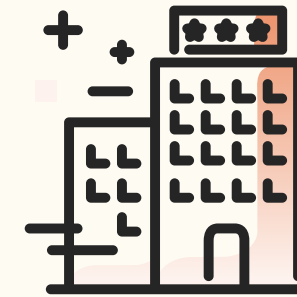

FREE ACCOUNT

Independent Doctors / Clinics

- **Have no accessible imaging infrastructure**
- can receive data from patients online
- receive higher-value patients
- save 5-10 min per appointment
- can connect to peers
- improve conversion of patients
- better follow-up
- improved patient experience
- become more visible

FREEMIUM

Large Clinics & Hospitals

- **Need a better way to manage referral networks and care delivery**
- Better triage
- Less time spent per patient
- Lower marketing costs
- Increase and manage referral network
- Digitised/automated processes around imaging and medical data
- More business & increased efficiency

CUSTOM PRICING

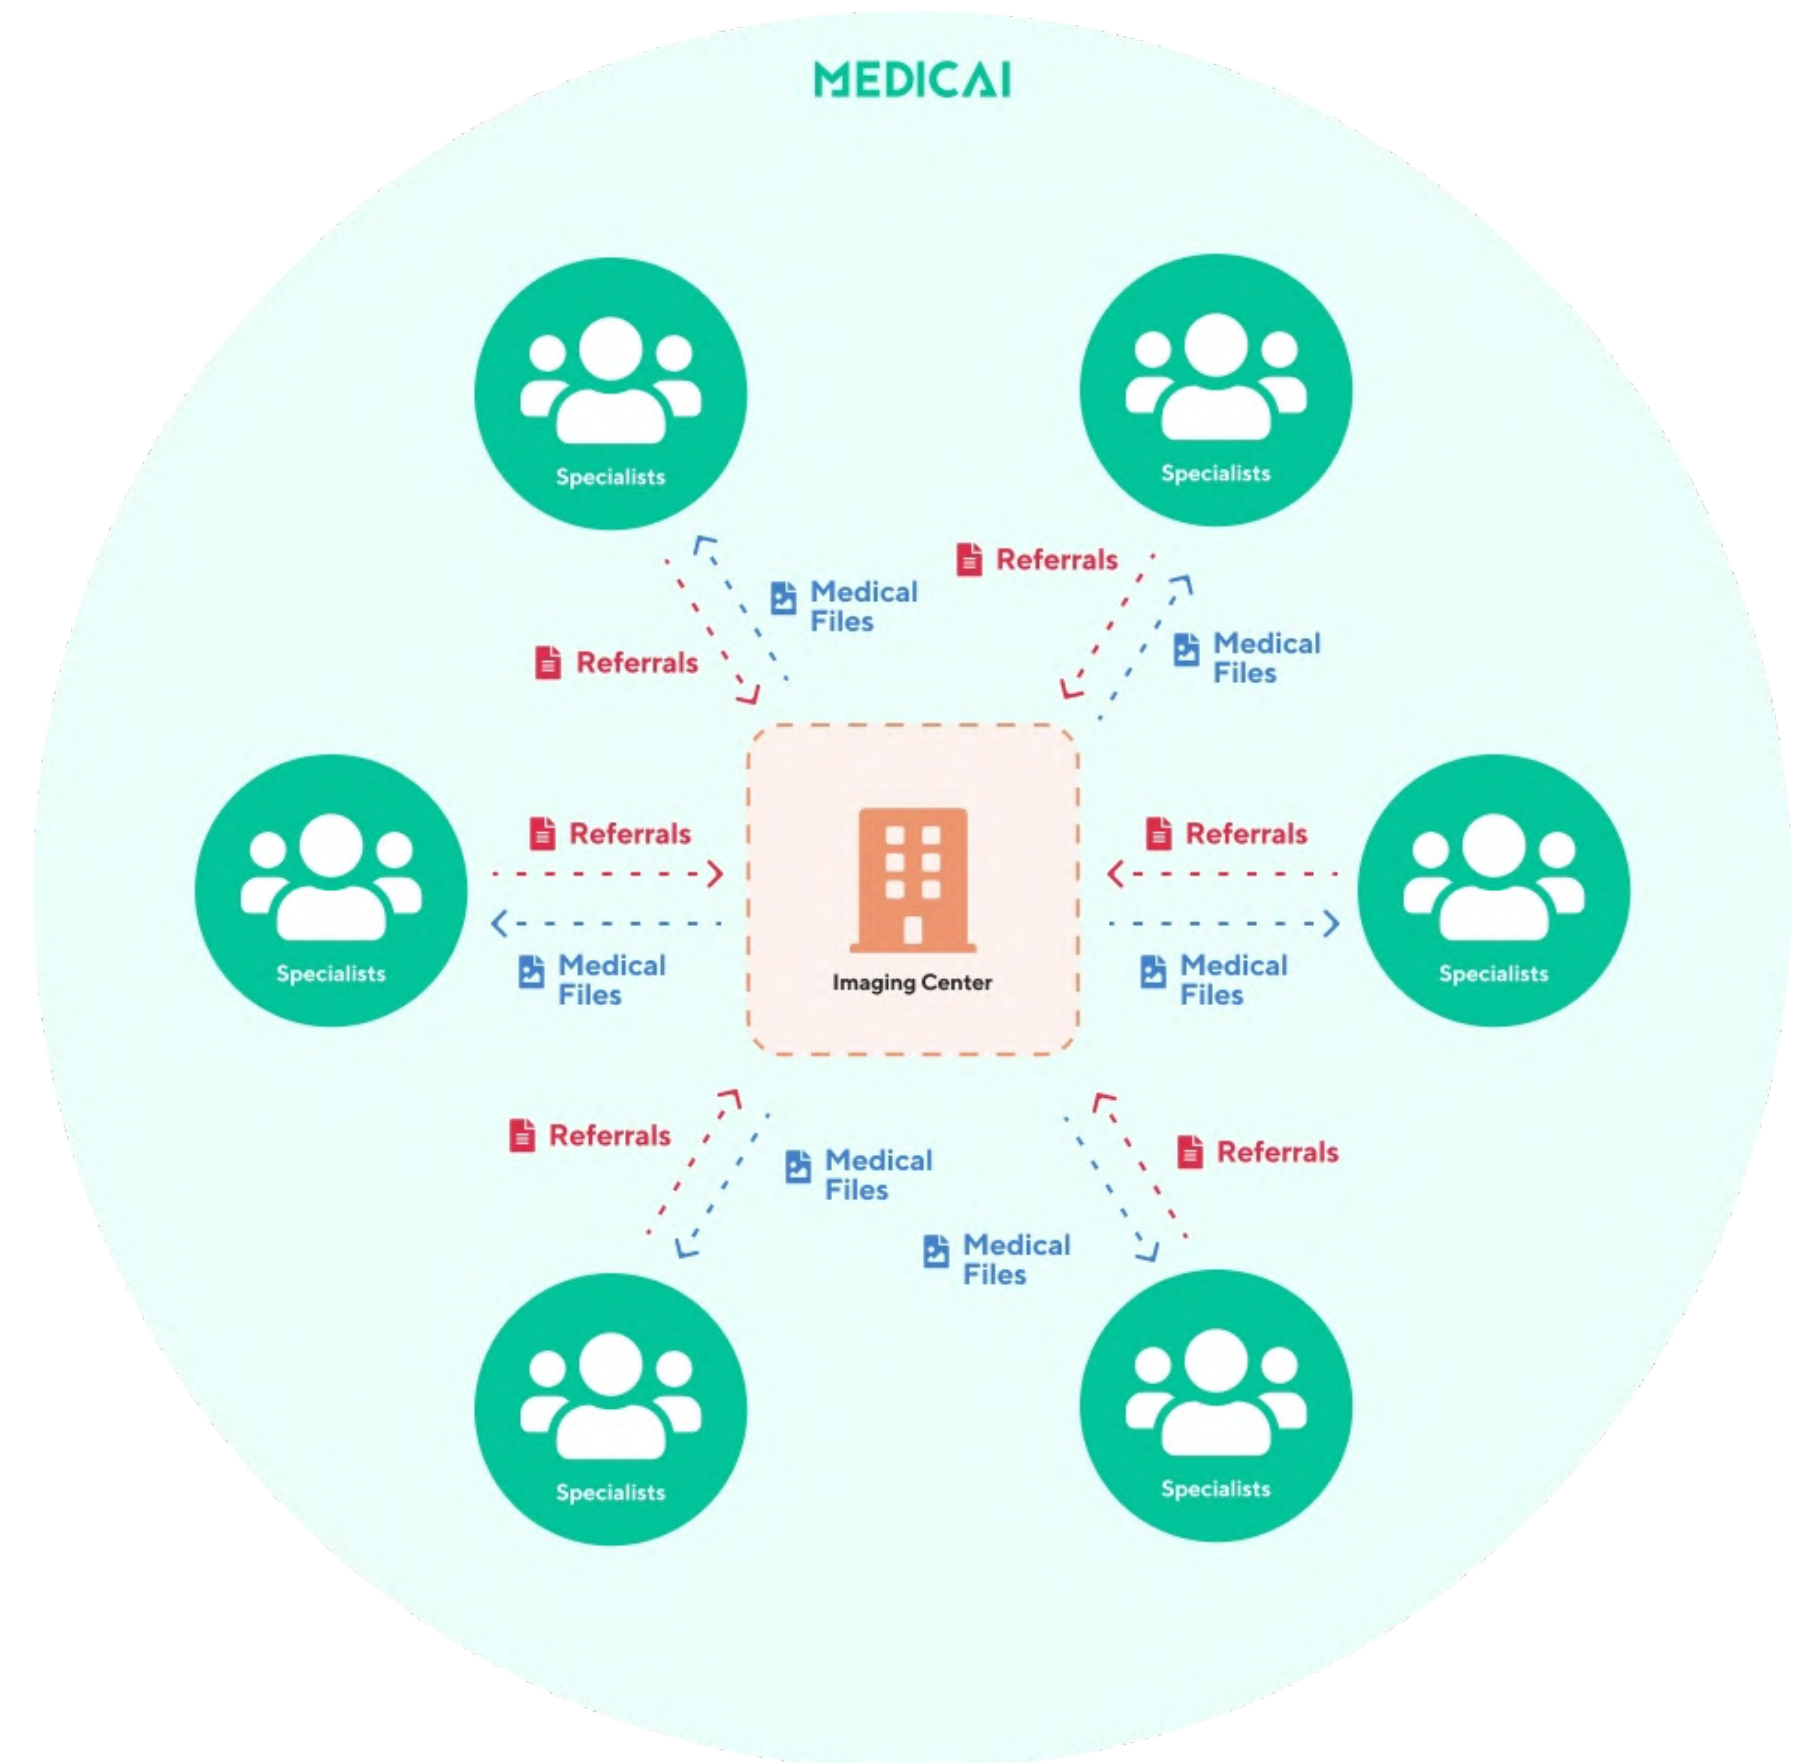

By connecting these stakeholders, we enable:

- New digital care pathways
- We connect the local specialist, local imaging center and the regional center for faster and better care
- Healthcare System Navigation through these pathways
- We enable Online Multidisciplinary Boards
- Expert Support Groups for chronic or rare conditions
- Accelerate the patient's journey from suspicion to diagnosis and treatment

OUR SOLUTION

Integrating MedicaI with existing PACS systems will bring:

- A smart layer on top of existing PACS systems
- Access to local imaging for the referral doctors from anywhere and on any device
- Images can be sent to referral doctors directly in their own account on the platform (without CDs)
- Doctors can create teams to discuss cases or hold multidisciplinary board meetings
- MedicaI is a network of doctors and clinics that can collaborate seamlessly independent of location or institution and puts the imaging center in the middle
- We can leverage the network to bring more patients by having automated inbound referrals integrated with EHR systems

CURRENT SITUATION

- there are many hospitals, referral doctors and there is no way of collaboration between them and offsite imaging centers
- the patient loses significant time and money if he has to arrive with a CD or a set of tests from one hospital to another
- doctors can see a limited number of patients because workflows are not optimized and time is limited
- the way in which hospitals receive patient imaging investigations from partners is neither productive nor digitized

THE PATIENTS

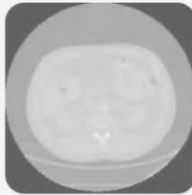

We bring patients on the platform

1. Medicaï allows to send directly the imaging files from your own PACS system in their patient account (Cost reduction with CD's)
2. Medicaï allows patients to store their imaging in their own accounts, and access them from anywhere
3. We empower patients to contact any doctor and share their imaging (and documents) anywhere
 - Real-time communication between doctors and patients.

Medical investigations + Upload investigations to the archive

Search name or SSN | Study date | Investigation type | Institution name

2 filtered investigations out of a total of 2 investigations

Architecture

Medicai orchestrates a decentralised storage infrastructure that allows medical data to reside in different places while enabling online real-time collaboration
